PROFESSIONAL SUMMARY

Software Engineer and Solutions Architect with fintech and e-commerce experience. At JazzCash, a digital financial services platform serving 60M+ customers, raised sustained payment throughput from ~200 to 800 TPS by optimising the API, middleware and database layers. Cut average response times from ~1.2s to under 400ms through caching, horizontal scaling and load balancing, and onboarded 8+ third-party integrations with reusable integration patterns. Experienced across the full software development lifecycle, from requirements and solution design through DevOps, observability and production support.

KEY SKILLS

- **Cloud & DevOps:** AWS, GCP, Terraform, Docker, Kubernetes/OpenShift, Jenkins, GitLab CI/CD, Infrastructure Provisioning
- **Integration & Messaging:** Apache Kafka, Red Hat AMQ, WSO2 Micro Integrator, API Management, Event-Driven Architecture
- **Databases:** PostgreSQL, MySQL, MongoDB, Cassandra, AWS RDS/Aurora
- **Observability:** Prometheus, Grafana, ELK Stack, CloudWatch, Incident Response, Load Testing
- **Backend:** Java, Python, Node.js/Express, Scala, TypeScript/NestJS, REST, gRPC, Microservices
- **Frontend:** React.js, Next.js
- **Ways of working:** Agile/Scrum, Solution Design (HLD/LLD), Capacity Planning, Stakeholder Management, GitHub, Jira, Confluence, Draw.io, Visio, AI-assisted development (Copilot, Claude, Cursor, Gemini, ChatGPT)

PROFESSIONAL EXPERIENCE

Solutions Architect | JazzCash | Islamabad, Pakistan | March 2025 – June 2026

Digital financial services platform serving 60M+ customers across payments, lending, insurance and investments.

- Owned architecture and end-to-end delivery of 16+ modules (requirements, API design, integration, TPS sizing, performance validation and UAT), enabling on-time releases and consistent production readiness across high-priority financial services.
- Supported Senior Architects on three core revenue-generating systems (Loan Management System, Recurring Automated Transaction Engine, Social Impact Hub) and coordinated delivery across 50+ engineers and business stakeholders, ensuring aligned execution and successful production launches.
- Defined and validated TPS targets; optimised API, middleware and database layers to increase sustained payment capacity from ~200 to 800 TPS.
- Improved high-traffic customer journeys through application and integration-layer caching, horizontal scaling and load balancing, reducing average response times from ~1.2 s to under 400 ms.
- Provisioned and operated enterprise middleware and cloud infrastructure (API Management, Apache Kafka, Red Hat AMQ, OpenShift, WSO2 Micro Integrator, ELK Stack and Jenkins CI/CD), providing a stable foundation that supported scaled payment volumes and faster release cycles.
- Onboarded 8+ third-party integrations across insurance, payments, lending and campaign management, establishing reusable integration patterns for subsequent partners.
- Designed the Screen Restriction module to prevent unauthorised exposure of financial data, closing an outstanding security audit finding ahead of compliance review.
- Partnered with Data Analytics to analyse screen-level call volumes and active-user behaviour, informing capacity and feature decisions without degrading page-load performance.
- Designed and delivered the CAPEX Management Portal and DFS Inventory Management Portal end-to-end (React.js, Node.js, REST APIs, PostgreSQL) from requirements through production deployment.
- Embedded secure development practices (role-based access controls, input validation and controlled API access) across production portals and services, reducing security risk and supporting successful compliance reviews.
- Served as the primary technical interface between business stakeholders and delivery teams, translating evolving commercial requirements into scalable architectures and reducing misalignment and rework across multiple initiatives.

Software Engineer | UpStart Commerce | Islamabad, Pakistan | August 2024 – March 2025

Live e-commerce platform — production support, reliability and performance.

- Led L1 and L2 production support, investigating incidents and root causes across 50+ tickets per month and reducing average resolution time by 50%.
- Diagnosed and resolved issues across payments, orders, customers, carts and inventory microservices, restoring business-critical customer journeys under production pressure.
- Monitored production health using Prometheus and Grafana; managed incidents and analysed recurring failure points to improve platform reliability and customer onboarding workflows.
- Collaborated with backend teams to optimise PostgreSQL data models, improving sustained request throughput and reliability across high-traffic checkout and order flows.
- Authored clear user guides and technical manuals for end users and internal teams, improving onboarding speed and reducing support queries related to platform functionality and workflows.

Full Stack Developer | AVROX Solutions | Remote | March 2024 – August 2024

Client delivery for UK and international customers.

- Implemented CI/CD pipelines and managed Docker and Kubernetes infrastructure to enable reliable, repeatable deployments for client applications.
- Designed, built and shipped full-stack applications for UK and international clients using React.js, Node.js, MongoDB, PHP and MySQL, delivering production-ready solutions from requirements through to live deployment.
- Coordinated delivery across internal teams and international clients, managing technical dependencies and timelines across 5 client projects delivered to schedule.

EDUCATION

BSc Software Engineering | National University of Computer and Emerging Sciences (FAST-NUCES), Islamabad, Pakistan

CERTIFICATIONS

Google Project Management Certificate

AWS Certified Cloud Practitioner

ACHIEVEMENTS

Huawei ICT Competition, Middle East and Central Asia Regional Finalist | 2024

Represented Pakistan at regional level, demonstrating applied expertise in cloud technologies and AI.

Cogent Labs IT Competition, Top 5 National Finalist | 2024

Placed in the top five teams nationally from a field of more than 100, presenting HealthCane, a computer vision solution for detecting abnormal human activity and generating real-time alerts.
